

● HOME REPAIRS, MADE SIMPLE

A little help. A better home.

That drip, squeak, or wobble? Get clear guidance for the small fixes that make a big difference.

World Labs Marble · Tripo · Convex · Mint

The instructions aren't the hard part.

Knowing which part they're talking about is. Three things broke in my apartment and I gave up on all three.

THE BATHROOM DOOR LOCK

Took it apart to find the problem.

Couldn't put it back.

THE REFRIGERATOR KNOB

Couldn't tell which part had failed.

Never fixed it.

THE WASHING MACHINE DIAL

Only got words for where to turn.

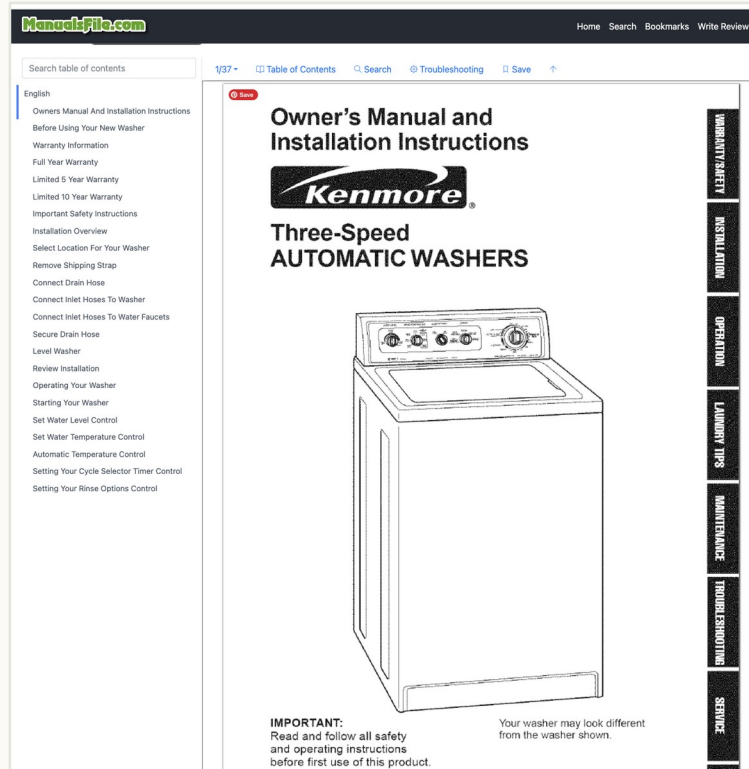

Wrung them out by hand.

The timer knob, once it was already out.

A manual can be correct and still useless.

Everything you need is in here. None of it tells you which part you're holding.

WHAT IT STILL DOESN'T TELL YOU

- Which part actually failed.
- Which direction it moves.
- How much force — and when to stop.

That gap is the whole product. Everything after this slide is about closing it.

The Kenmore manual for this exact washer.

From “what's that?” to “got it.”

Six steps, each one tied to a part you can actually see.

01

Photo

Show the visible problem and what changed.

02

Diagnose

A tentative assessment, not a confirmed one.

03

Reconstruct

Start from a labeled reference model.

04

Repair plan

Match reviewed catalog steps to the problem.

05

Visualize in 3D

Separate, rotate, isolate the part.

06

Guide

Direction, force limits, and when to stop.

Take it apart. On screen.

Separate an object into its visible components and inspect each one — without touching your own hardware.

Explode view

Focus part

Isolate part

In the live demo this is a four-part door you can rotate — a procedural illustration, not a scan of your home, and not permission to take anything apart.

Timer knob — outer knob, insert, retaining clip, timer shaft.

Confidence, not overconfidence.

We stick to small, low-risk repairs.

- Electrical, gas, structural work or major leaks — stop and call a pro.
- Draft content stays labeled draft, never as ready-to-use instructions.
- Generated geometry is a labeled reference model, reviewed by a human.
